

Academic Year in Review

SIT is committed to an aptitude-based admissions process that looks beyond just academic achievements. Applicants are evaluated holistically, also taking into account their interests, relevant work experience, and achievements related to their programme of choice. This rigorous selection process ensures that SIT admits the best fit of students that are passionate about their field of study, and who can thrive in the University’s distinctive applied learning environment.

The AY2022 admissions exercise saw 12,902 applications — a 0.7% increase over the year before. Intake increased by 5.7% to 3,121. Over 7,000 assessments were conducted during the exercise via face-to-face synchronous interviews, and/or asynchronous video interviews to facilitate a holistic and aptitude-based review of selected applicants.
