

Chairman's Message

Sustainability has long guided the way we think and make decisions, since our early years. This Report sets out that commitment clearly and establishes a foundation for our goals and priorities ahead.

In the face of intensifying climate impact and an increasingly uncertain global landscape, sustainability is critical to ensuring long term resilience for people, planet and economies. The values, knowledge and skillsets our graduates carry into the workforce, the research we pursue, and the partnerships we build must all be oriented towards a more resilient future.

From its inception as Singapore's fifth Autonomous University in 2014, SIT has explored ways to incorporate sustainability content into its curriculum and operations. To ensure that sustainability remains at the highest level of institutional governance, the Board of Trustees established the Sustainability Committee in 2021 to provide dedicated oversight of SIT's sustainability strategy, performance and initiatives. Beyond governance, we continue to focus on producing industry-ready graduates with nimbleness in adapting our curricula to respond to fast-evolving sustainability demands in the industry. In applied research, we actively engage in practical co-

solutioning with our partners to address real-world challenges. Importantly, we are committed to walking the talk — ensuring sustainability is reflected in our practices to uphold organisational excellence.

SIT's new Punggol Campus serves as a significant enabler of our next phase of growth. The consolidation from six separate campuses into a single, integrated environment has created exciting opportunities to advance sustainability more holistically across our education, partnerships and operations.

I am grateful for the unwavering support and meaningful partnerships we have with our stakeholders in driving sustainability impact collaboratively. Together, we will continue building an innovative and resilient institution of applied learning, for industry.

Mr Bill Chang

Chairman, Board of Trustees
Singapore Institute of Technology

“As an institution built on applied learning and industry partnership, SIT has both the responsibility and the opportunity to shape a more sustainable future. Punggol Campus is where that commitment takes tangible form.”
